EDUCATION

Indian Institute of Information Technology, Nagpur

Dec 2021 to May 2025

B.Tech in Computer Science and Engineering

Nagpur, India

TECHNICAL SKILLS

Languages: C++, Go, Java, Python, JavaScript, TypeScript, SQL

Backend: Node.js, Express.js, FastAPI, REST APIs, Microservices

Frontend: React, Next.js **AI/LLM:** LangGraph, MCP, RAG, Langfuse

Databases: YugabyteDB, PostgreSQL, MongoDB, BigQuery, pgvector

Cloud/DevOps: AWS (Cognito, Lambda, S3), Google Cloud Run, Docker, Jenkins, GitHub Actions

EXPERIENCE

Yugabyte

Bengaluru, India

Software Engineer I (Promoted) | Software Engineer Intern

Sept 2025 to Present | Sept 2024 to Aug 2025

- Engineered **Meko** knowledge base uploads across 3 services using React, Go, Python, and presigned S3 requests, rejecting invalid, spoofed, and duplicate files before ingestion through 4 upload guardrails.
- Designed conversation trace observability across knowledge base and memory retrievals, eliminating cross turn double counting and enabling per step debugging through embedded Langfuse traces.
- Delivered AWS Cognito authentication for Google, LinkedIn, and GitHub, supporting profile completion and identity linking while hardening invite errors, logout behavior, and federated account flows.
- Contributed YugabyteDB embedding and chat memory support to LangChain4j through a merged upstream commit with published docs, adding HNSW and hybrid search, metadata filters, and Testcontainers coverage.
- Developed a database migration validator that tracks schema versions and dirty states, blocking invalid migrations before merge and surfacing actionable feedback in GitHub.
- Automated a Go analytics pipeline from GCS to BigQuery, MadKudu, and Salesforce, replacing manual data movement with scheduled transformation, lead scoring, and CRM synchronization.
- Implemented the end to end YB Voyager workflow in yugabyted UI, exposing assessment, schema, data, and cutover analytics so users can understand migration progress without interpreting CLI output.

Zluri

Aug 2024 to Sept 2024

Software Engineer Intern

Bengaluru, India

- Resolved 13+ production bugs in JavaScript/Node.js and MongoDB, and built a testing framework with QA dashboards that increased test coverage by 20% and improved query performance by 30%.

PROJECTS

EternalAgni: Agnihotra Reminder App

July 2026 to Present

JavaScript, Capacitor, Android, PWA, Service Workers, Local Notifications

[SOURCE CODE](#) | [ANDROID BETA](#)

- Built a custom NOAA timing engine with ± 1 second accuracy, generating 92 day sunrise and sunset schedules locally for offline use.
- Delivered reliable reminders with 2 to 60 minute lead times, duplicate suppression, late delivery protection, and client side scheduling.
- Shipped Android and PWA releases with GPS/IP fallbacks, service worker recovery, and automated APK/AAB builds.

YB Voyager Copilot: AI Powered Database Migration Assistant

Jan 2025 to Present

LangGraph, FastAPI, Next.js, Python, MCP, Docker, YugabyteDB, RAG

[DOCKER HUB](#) | [ARCHITECTURE](#) | [DEMO](#)

- Architected a 3 agent LangGraph and MCP workflow covering all four migration stages with grounded product documentation.
- Built a 3 tier RAG backend and containerized 5 services with FastAPI, pgvector, YugabyteDB, and Docker, supporting persistent data.
- Automated delivery and migration reports using GitHub Actions and Playwright, with production sizing recommendations.

ACHIEVEMENTS

- Achieved Guardian status with a maximum rating of 2145 on LeetCode, 4 star status with a 1944 rating on CodeChef, and Specialist status with a maximum rating of 1484 on Codeforces.
- Received Best Use of AI recognition for YB Voyager Copilot at the YugabyteDB internal hackathon and placed 3rd in Algorithmia at Tantrafiesta 2023.
