Education

Indian Institute of Information Technology, Nagpur

December 2021 to May 2025

Bachelor of Technology in Computer Science and Engineering

Nagpur, India

Technical Skills

Languages: C++, Go, Java, Python, JavaScript, TypeScript, SQL

Backend: Node.js, Express.js, FastAPI, REST APIs, Microservices

Frontend: React, Next.js **AI/LLM:** LangGraph, MCP, RAG, Langfuse

Databases: YugabyteDB, PostgreSQL, MongoDB, BigQuery, pgvector

Cloud/DevOps: AWS (Cognito, Lambda, S3), Google Cloud Run, Docker, Jenkins, GitHub Actions

Professional Experience

Yugabyte

Bengaluru, India

Software Engineer Intern → Software Engineer I

September 2024 to August 2025 → September 2025 to Present

- Engineered **Meko** knowledge base uploads across 3 services using React, Go, Python, and presigned S3 POST requests. Enforced 3 storage edge checks for file size, type, and content spoofing while offloading large transfers from API servers.
- Built **Meko's** memory retrieval observability and promotion flow with top-k retrieval across memory and knowledge base context. Replaced full conversation replay, reducing input token usage by **35%** for marketing and lead generation workflows.
- Delivered **AWS Cognito authentication across 3 identity providers:** Google, LinkedIn, and GitHub. Supported profile completion and identity linking while hardening invite, logout, and federated account flows.
- Contributed 2 **YugabyteDB integrations to LangChain4j:** embedding storage and chat memory. Added HNSW and hybrid search, metadata filters, Java Testcontainers coverage, and published [docs](#) through a merged upstream [commit](#).
- Developed a database migration validator for 2 health signals: schema version and dirty state. Blocked invalid migrations before merge and surfaced actionable GitHub feedback.
- Built a Go failure notification service adopted by 4 **YugabyteDB teams**. Centralized automated Slack alerts to streamline failure monitoring.
- Automated a Go analytics pipeline across 5 systems: Scarf, GCS, BigQuery, MadKudu, and Salesforce. Ingested Scarf data through GCS into BigQuery for transformation, lead scoring, and CRM synchronization.
- Implemented the end-to-end **YB Voyager workflow in yugabyted UI** across 4 migration stages: assessment, schema, data, and cutover. Exposed progress analytics without requiring users to interpret CLI output.

Zluri

Bengaluru, India

Software Engineer Intern

August 2024 to September 2024

- Resolved **13+ production bugs** in JavaScript/Node.js and MongoDB. Built QA dashboards and a testing framework, increasing coverage by 20% and query performance by 30%.

Projects

EternalAgni: Agnihotra Reminder App

July 2026 to Present

JavaScript, Capacitor, Android, PWA, Service Workers, Local Notifications

[SOURCE CODE](#) | [INTERNAL TESTING](#)

- Built a custom **NOAA timing engine** with ± 1 -second accuracy. Generated sunrise and sunset schedules for **92 days (~3 months)** locally for offline use.
- Delivered **reliable reminders** with **2-to-60-minute** lead times. Added duplicate suppression, late delivery protection, and client-side scheduling.
- Shipped releases across 2 platforms: Android and PWA. Added GPS/IP fallbacks, service worker recovery, and automated APK/AAB builds.

YB Voyager Copilot: AI Powered Database Migration Assistant

January 2025 to Present

LangGraph, FastAPI, Next.js, Python, MCP, Docker, YugabyteDB, RAG

[DOCKER HUB](#) | [ARCHITECTURE](#) | [DEMO](#)

- Architected a **3-agent LangGraph and MCP workflow** covering all 4 migration stages with grounded product documentation.
- Built a **3-tier RAG backend and containerized 5 services** with FastAPI, pgvector, YugabyteDB, and Docker. Enabled persistent data across the workflow.
- Automated 2 report workflows: delivery and migration. Used GitHub Actions and Playwright to generate production sizing recommendations.

Achievements

- Received **Best Use of AI** recognition for YB Voyager Copilot at the YugabyteDB internal hackathon.
- Earned **Guardian status with a maximum rating of 2145** on LeetCode. Reached **4-star status with a 1944 rating** on CodeChef and **Specialist status with a maximum rating of 1484** on Codeforces.
- Secured **3rd place** in Algorithmia at Tantrafiesta 2023.
