EDUCATION

Indian Institute of Information Technology, Nagpur

Dec 2021 to May 2025

B.Tech in Computer Science and Engineering

Nagpur, India

TECHNICAL SKILLS

Languages: C++, Go, Java, Python, JavaScript, TypeScript, SQL

Backend: Node.js, Express.js, FastAPI, REST APIs, Microservices

Frontend: React, Next.js **AI/LLM:** LangGraph, MCP, RAG, Langfuse

Databases: YugabyteDB, PostgreSQL, MongoDB, BigQuery, pgvector

Cloud/DevOps: AWS (Cognito, Lambda, S3), Google Cloud Run, Docker, Jenkins, GitHub Actions

EXPERIENCE

Yugabyte

Bengaluru, India

Software Engineer Intern → Software Engineer I

Sept 2024 to Aug 2025 → Sept 2025 to Present

- Engineered **Meko** knowledge base uploads across 3 services using React, Go, Python, and presigned S3 POST requests, enforcing 3 storage edge checks for file size, type, and content spoofing while offloading large file transfers from API servers.
- Built Meko's memory retrieval observability and promotion flow, using top-k retrieval across memory and knowledge base context instead of replaying full conversation history, reducing input token usage by 35% across marketing and general purpose AI agent workflows.
- Delivered AWS Cognito authentication across 3 identity providers - Google, LinkedIn, and GitHub, supporting profile completion and identity linking while hardening invite errors, logout behavior, and federated account flows.
- Contributed 2 YugabyteDB integrations - embedding storage and chat memory - to LangChain4j through a merged upstream commit with published docs, adding 2 search modes, metadata filters, and Java Testcontainers coverage.
- Developed a database migration validator tracking 2 migration health signals - schema version and dirty state, blocking invalid migrations before merge and surfacing actionable feedback in GitHub.
- Built a Go failure notification service adopted by 4 YugabyteDB teams, centralizing automated Slack alerts to streamline failure monitoring.
- Automated a Go analytics pipeline across 5 systems - Scarf, GCS, BigQuery, MadKudu, and Salesforce, ingesting Scarf data through a GCS bucket into BigQuery for scheduled transformation, lead scoring, and CRM synchronization.
- Implemented the end to end YB Voyager workflow in yugabyted UI, exposing analytics across 4 migration stages - assessment, schema, data, and cutover - so users can understand progress without interpreting CLI output.

Zluri

Bengaluru, India

Software Engineer Intern

Aug 2024 to Sept 2024

- Resolved 13+ production bugs in JavaScript/Node.js and MongoDB, and built a testing framework with QA dashboards that increased test coverage by 20% and improved query performance by 30%.

PROJECTS

EternalAgni: Agnihotra Reminder App

July 2026 to Present

JavaScript, Capacitor, Android, PWA, Service Workers, Local Notifications

[SOURCE CODE](#) | [ANDROID BETA](#)

- Built a custom NOAA timing engine with ± 1 second accuracy, generating 92 day sunrise and sunset schedules locally for offline use.
- Delivered reliable reminders with 2 to 60 minute lead times, duplicate suppression, late delivery protection, and client side scheduling.
- Shipped releases across 2 platforms - Android and PWA with GPS/IP fallbacks, service worker recovery, and automated APK/AAB builds.

YB Voyager Copilot: AI Powered Database Migration Assistant

Jan 2025 to Present

LangGraph, FastAPI, Next.js, Python, MCP, Docker, YugabyteDB, RAG

[DOCKER HUB](#) | [ARCHITECTURE](#) | [DEMO](#)

- Architected a 3 agent LangGraph and MCP workflow covering all four migration stages with grounded product documentation.
- Built a 3 tier RAG backend and containerized 5 services with FastAPI, pgvector, YugabyteDB, and Docker, supporting persistent data.
- Automated 2 report workflows - delivery and migration using GitHub Actions and Playwright, with production sizing recommendations.

ACHIEVEMENTS

- Achieved Guardian status with a maximum rating of 2145 on LeetCode, 4 star status with a 1944 rating on CodeChef, and Specialist status with a maximum rating of 1484 on Codeforces.
- Received Best Use of AI recognition for YB Voyager Copilot at the YugabyteDB internal hackathon and placed 3rd in Algorithmia at Tantrafiesta 2023.
